SUMMARY

Second-year Computer Science undergraduate working as a software developer since January 2026, after an AR/VR internship the summer before the degree began. Led development of Softventory, an enterprise inventory SaaS in production, then shipped BrandThis and PitchMyWeb at Claxon AI. Now freelancing, currently building a quick-commerce app for a client. Hands-on across the full stack – TypeScript, React/Next.js, NestJS, PostgreSQL and Redis – with experience designing multi-tenant architecture and running production deployments.

EXPERIENCE

Software Developer — Freelance Oct 2026 – Present

Sites and apps for clients

- Building a quick-commerce app for a client end to end, from scope and quote through to handover.

Software Development Intern — Claxon AI Aug 2026 – Oct 2026

PitchMyWeb and BrandThis (pitchmyweb.in)

- Built PitchMyWeb end to end: it finds local businesses without a website, builds each a sample site from a template library and pitches it from the user's own WhatsApp – Next.js, PostgreSQL/Prisma, Redis/BullMQ and a Python lead-discovery worker.
- Took it to production on AWS (Terraform) behind Cloudflare, with paid campaigns, transactional email, Turnstile on sign-up and an admin portal behind Cloudflare Access.
- Shipped BrandThis, a brand-intelligence SaaS that turns a company's website into a reusable Brand DNA (colour system, typography, voice) so generated content stays on-brand.

Software Developer — Softdigit Consulting Jan 2026 – Jul 2026

Softventory – Inventory Control & Management System (softdigitconsulting.com)

- Lead developer on an enterprise inventory management SaaS: React, Next.js, TypeScript and Tailwind CSS on the frontend; a NestJS modular monolith with PostgreSQL, Prisma and Redis on the backend.
- Shipped bulk product uploads with plant-level assignment, expiry and batch-lot tracking with FEFO allocation, a drag-and-drop stock transfer workflow and an outbox-based notification escalation engine.
- Drove a multi-tenant architecture redesign: PostgreSQL row-level security, an append-only stock movement ledger and a domain event catalog; designed multi-tier backup and recovery for self-hosted PostgreSQL.
- Owned deployment and CI: Vercel (frontend), Docker on a VPS (backend) and GitHub Actions pipelines.

AR/VR & XR Development Intern — Ingage Jun 2025 – Jul 2025

- Immersive development across Unity, Unreal Engine, WebXR/three.js and mobile AR (ARCore, ARKit) – my first professional work, the summer before the degree began.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, C, SQL, HTML, CSS

Frameworks & Libraries: React, Next.js, NestJS, Node.js, Express, Tailwind CSS, three.js

Databases & Queues: PostgreSQL, Prisma ORM, Redis, BullMQ, MongoDB

Infrastructure: AWS, Terraform, Cloudflare, Docker, Vercel, GitHub Actions, Linux (VPS), Git

EDUCATION

B.E. Computer Science & Engineering 2025 – 2029

Sathyabama Institute of Science and Technology, Chennai

CGPA: 8.2 / 10
